

## EFA Global Monitoring Report 2007: Strong Foundations – Summary

### **Indexing Guidelines**

This summary document introduces the main findings of the 2007 report monitoring progress on the 'Education for All' international goals. You should index the introduction and main text only, p7-38.

In the document there are a number of minor references to countries and regions; however the main intention of the summary is to provide an overview of the general overall progress towards the 6 EFA goals. The report itself provides very detailed information on individual countries and regions.

It is therefore suggested that you produce a subject index to this document, omitting geographical references. If you wish to include countries as part of the exercise, please bear in mind that the sample index does not include countries and regions.
